

# PartCreator

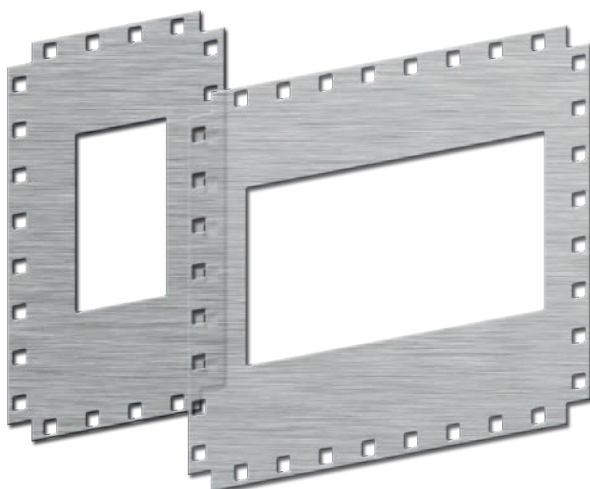

**A CAD/CAM solution that lasts!**

## Create And Manage Complex Components

Ever-increasing demands are placed on your enterprise's production processes, so it's important to keep complexity and room for error at a minimum. A simple way to achieve this is to split large constructions into smaller components, and our products offers a highly developed solution allowing you to do exactly that.

**PartCreator** is an optional module specially developed for creating complex parts and assemblies using variants and components. Additionally to this module, our contract management module **SHEET METAL CENTER Plus** can be used to manage the components created, allowing you to create a library so you can easily find and reuse your work.

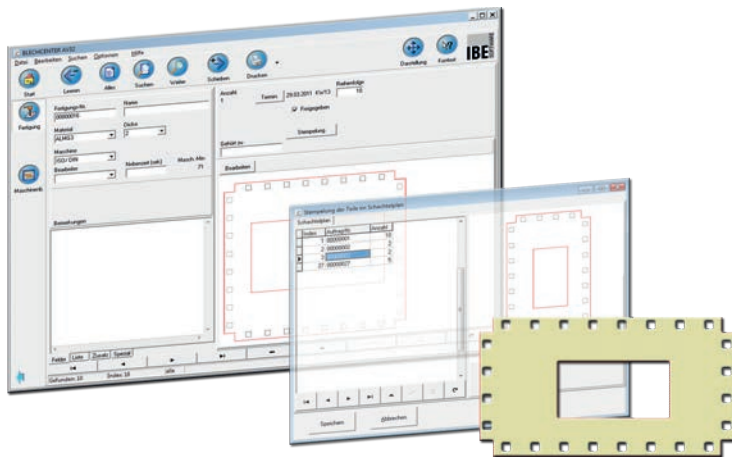

**SHEET METAL CENTER Plus** offers many advantages. Focus remains on the job in hand, which can be combined and worked with others to increase efficiency through time and material savings. Complex assemblies can be managed as projects. Add new elements to a part or delete and edit existing elements. Find the assembly corresponding to an individual part, or vice versa. **SHEET METAL CENTER Plus** helps you to work smarter by reducing admin load and duplication of labor, and increasing reusability of previously completed work.

**Dynamic Macro**

### Your Advantages Summarized:

- Quick and easy to use.
- Dynamic macros available.
- Processes fully automatable.
- Saved components can be loaded, edited and reused.
- Design and planning back under control.
- Room for error reduced by splitting assemblies.
- In case of a production error, simply exchange one component.
- Better address the problem of production complexity.

### Reuse Components

Single parts can be separated from their components and re-dimensioned as required for reuse. You can create a library of oft-used or basis parts in this way. All components created can be searched and edited using our management module ***SHEET METAL CENTER Plus***.

### Quick And Easy To Use

All new products from IBE Software focus on our new usability principle, including ***PartCreator***. Our software is self-explanatory and intuitively useable, reducing training requirements and costs for your service technicians and customers.

### Design and Planning Back Under Control

Reduce production complexity by splitting complex projects into individual components. This helps you to keep design and planning manageable, reducing susceptibility to error; if there is a production error, simply exchange one component.

### Better Address The Problem Of Production Complexity

***SHEET METAL CENTER Plus*** offers many optional modules, opening up extra capabilities such as the ability to create quick yet precise price quotations. Part lists and formulae help you to further minimize production complexity.
